

Database creation instructions:

1. Create the database creation script [Oracle-database-creation-script.sql](#)
2. Open a cmd window (run as administrator) and navigate to the folder where your sql scripts is stored (using the cd command before the folder path)
3. Inside the command window, start up sql plus as follows: 'sqlplus / as sysdba'
4. This will connect you as sysadmin and once connected, issue the command inside sqlplus @Oracle-database-creation-script.sql
5. The script will create the database as written in the script including the tables, views, triggers
6. If there are any errors, it will show errors in the command prompt terminal.
7. Go to your oracle, log in using the username and password that was created and open the new database.
8. Everything should be seen in the oracle database now.
